

Analytics Repository

Overview

This folder contains a complete analytics repository for the project. It includes datasets, statistical outputs, financial analysis, advanced visualizations, and Python-based analytical workflows.

Folder Structure

1. Statistical Figures

- Contains statistical charts and analytical visualizations
- Includes summary graphs, distributions, comparisons, and trend-based figures

2. Python Directory (IMPORTANT)

- Core Python scripts and analytical codebase
- Used for:
 - Data cleaning
 - Data processing
 - Statistical analysis
 - Figure generation
 - Model execution

3. Financial Figures

- Financial analysis visualizations
- Includes:
 - Revenue trends
 - Financial comparisons
 - Growth analysis
 - Economic indicators

4. Data

- Stores raw and processed datasets used in the project
- Acts as the primary data source directory for all analyses

5. Advance Analytical Figures

- Contains advanced analytical and insight-driven visualizations
 - Includes:
 - Comparative analytics
 - Forecasting visuals
 - Advanced statistical outputs
 - High-level interpretation figures
-

Main Files

master_statistics.csv

- Consolidated summary statistics file
- Contains key computed metrics and analytical summaries

DataDividend_Analytics_Workbook.xlsx

- Central Excel workbook for the project
 - Includes:
 - Analytical tables
 - Financial calculations
 - Statistical summaries
 - Structured outputs and reporting
-

Purpose of the Repository

- Centralized storage of analytical outputs
- Organized management of datasets and figures
- Support for statistical, financial, and advanced analytical research
- Consolidation of all project deliverables in one structured repository
